comprise BAC clone 22608. The sequences contain polymorphic microsatellite repeat (PMR) sequences. The specification describes a method for determining the predisposition of a human subject to develop autoimmune disease. The method comprises detecting a PMR sequence in the CD28, ICOS gene or CTLA4 gene of the human costimulatory receptor gene locus (HCGRL). PMR sequences vary in length among individuals and can be amplified to generate products that differ in size. These products can then be detected by rapid and convenient high resolution processes. The method is useful for determining the predisposition of insulin-dependent diabetes mellitus (IDD4), Addison's disease, Graves disease, autoimmune hypothyroidism, myasthenia gravis, thymoma, lupus, thyroiditis, postpartum thyroiditis, rheumatoid arthritis, Hashimoto's disease, coellac disease and leprosy. PMR sequences within hCRGL are useful as markers in a variety of assays and in the field of forensic medicine,

```

```
mesencephalic dopaminergic neurons, Ptx3, isolated from rat tissue. The products and methods of the invention can be used to identify a gene related to neurological or psychiatric disorders. They can be used to test or develop specific medication for a neurological or psychiatric disorder, such as Parkinson's disease, tardive dyskinesia, manic depression, or schizophrenia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence represents the mouse Pitx3 gene. Pitx3 proteins are homeobox domain proteins, which are involved in the development of the lens and contribute to diseases and disorders of the lens, such as cataracts. The Pitx3 nucleic acids (e.g. antisense sequences, ribozymes and triplex nucleic acids), probes derived from them and polypeptides, are useful in claimed methods to detect an ocular disease, especially of the lens, e.g. cataract formation. Specific conditions that can be detected and treated are Anterior Segment Mesenchymal Dysgenesis (ASMD) and Peter's anomaly.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  gcaggagcgcctagtgggtcatctgaaggaaaggacaagacacactccaagccggacacg 82

DNA encoding prochymosin can be cloned into a plasmid ( esp. from S. cremoris SK112) and used to produce large amts of the protein by eccombinant DNA techniques. The plasmid pref. contains this sequence from the downstream region of the proteinase regulatory region(used to control expression of the protein). Prodn of prochymosin in this way could overcome the shortage of prochymosin due to a shortage of calf stomachs and increasing cheese prodn. Prochymosin is also used in prodn. See also AAN91157-N91160.
                                                                                                                                                                                                                                                                                                                                                                                             \iota sequence downstream of the proteinase promoter fragment from pSK111 S. cremoris SK211.
                                                                                                                                                                                                                                                                                                                                                                                                                                                        Lactic acid bacteria; cheese; Streptococcus cremoris SK112; proteinase;

AXX12938 to AXX13919 represent these nucleotide sequences which are primary nucleotide sequences, also known as contigs. The computer-based system can identify fragments of the Enterococcus faecalis genome with commercial importance. The products can be used to detect the presence of Enterococcus faecalis in samples. They can also be used for progression of disease, and for identifying agents which can be used to modulate the growth or pathogenicity of Enterococcus faecalis, or another related organism, in vivo or in vitro. In particular the polypeptides encoded by the Enterococcus faecalis nucleotide sequences can be used in vaccines to prevent or attenuate an Enterococcal
                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New isolated Enterococcus faecalis polynucleotides and polypeptides - used to develop products for the detection of Enterococcus and for use in vaccines for prevention or attenuation of Enterococcus

The mutant protease having mew cleavage specificities is obtained by deleting three amino acids (nine bps).

This mutant may then be used to prepare hybrid protease genes, the fusion being between a type I and a type III protease gene of L.lactis Wg2 and SXII.

The product has modified properties, e.g. thermostability, autoproteolysis etc., compared to the parent protease(s). The proteases can be used for preparing products (butter cheese, human and animal foodstuffs)

The proteases can be used for preparing products (butter cheese, human and animal foodstuffs) prepared with the aid of lactic acid bacteria. See also AAQ10411-17 and AAQ10870-71.

The mutant protease K138N having mew cleavage specificities is
Dobtained by carrying out single amino acid substitutions.
This mutant may then be used to prepare hybrid protease genes,
the fusion being between a type I and a type III protease gene of
L.lactis Wg2 and SK11.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Mutant protease gene(s) and protease(s) - derived from type I and III protease genes from lactococcal strains, used in fermentation foodstuffs and flavourings
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The wild-type L.lactis SK11 protease gene sequence was determined

The proteases can be used for preparing products (butter cheese, human and animal foodstuffs) prepared with the aid of lactic acid bacteria. See also AAQ10411-17 and AAQ10870-71.

The mutant protease N166D having mew cleavage specificities is obtained by carrying out single amino acid substitutions.
This mutant may then be used to prepare hybrid protease genes, the fusion being between a type I and a type III protease gene of L.lactis Wg2 and SKII.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         from type I and

The mutant protease 4330(4318) having mew cleavage specificities is obtained by replacing two amino acids (nine bps).

This mutant may then be used to prepare hybrid protease genes, the fusion being between a type I and a type III protease gene of L.lactis Wg2 and SKII.

The product has modified properties, e.g. thermostability, autoproteolysis etc., compared to the parent protease(s). The proteases can be used for preparing products (butter cheese, human and animal foodstuffs) preparing products (actic acid bacteria. See also AAQ10411-17 and AAQ10870-71.

Order This is a "working draft" sequence. It currently consists of 12 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               NOTE: This is a 'working draft' sequence. It currently consists of 34 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequencing vector: Mi3; 100%

The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

represent the correct sequence. Work on the sequence is in progress and the release of this data is based on the understanding that the sequence may change as work continue. The sequence may be contamined with foreign sequence from E.coli, yeast, vector, phage, etc. . even if efforts are made to eliminate these contaminating sequences. The following BAC sequence is oriented from the 77 to the SP6 end.

Upstream BAC (overlapping the 77 end) : R-728G21

Downstream BAC (overlapping the SP6 end) : R-757K12 (AC-AL390335)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ä

                                                                                                                                                                                                                                                                                                         Web: www.genoscope.cns.fr)
On Aug 6, 2000 this sequence version replaced gi:9453789.
IMPORTANT: This sequence is unfinished and does not necessarly
represent the correct sequence. Work on the sequence is in progress
and the release of this data is based on the understanding that the
sequence may change as work continue. The sequence may be
phage, etc. . even if efforts are made to eliminate these
contaminating sequences. The following BAC sequence is oriented
from the T7 to the SP6 end.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1;

* NOTE: This is a 'working draft' sequence. It currently
* consists of 48 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.

Submitted (01-MAR-2001) Sanger Centre, Hinxton, Cambridgeshire, Callo 18A, UK. E-mail enquiries: humquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk

On Jun 20, 2000 this sequence version replaced g1:8388434.

During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:

Ems. EMBL: Sww. SWISSROT: Tr. TREMBL: WP: WORMPEP: Information on the WORMPEP database can be found at
                                                                                                             Human DNA sequence from clone RP3-470L14 on chromosome 20 Contains the CSELL gene for chromosome segregation 1 (yeast homolog)-like protein, the STAU gene for Staufen (RNA-binding protein), a novel gene similar to ARC21 encoding the Arp2/3 protein complex subunit p21-Arc, a CpG island, ESTs, STSs and GSSs, complete sequence. It currently consists of 11 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as arbitrary on the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequencing vector: M13; M77815; 100% of reads Sequencing vector: M13; M77815; 100% of reads Chemistry: Dye-terminator B19 Dye; 100% of reads Assembly program: Phrap; version 0.660731 Consensus quality: 146633 bases at least Q40 Consensus quality: 146520 bases at least Q30 Consensus quality: 150601 bases at least Q20 Insert size: 157000; agarose-fp Insert size: 157000; agarose-fp Quality coverage: 4.6 in Q20 bases; sum-of-contigs Quality coverage: 4.7 in Q20 bases; sum-of-contigs

It currently consists of 7 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Contact: sequence_submissions@genome.wi.mit.edu

* NOTE: This is a 'working draft' sequence. It currently
consists of 2 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.

* NOTE: This is a 'working draft' sequence. It currently
* consists of 14 contigs. The true order of the pleces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.

Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

* NOTE: This is a 'working draft' sequence. It currently
* consists of 21 contigs. The true order of the pleces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      NOTE: This is a 'working draft' sequence. It currently consists of 11 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ALIS7775 163960 bp DNA PRI 12-APR-2001
Human DNA sequence from clone RPI1-525021 on chromosome 6 Contains
the 3' end of the F13A1 (coagulation factor XIII, A1 polypeptide)
gene, E3Ts, STSs and GSSs, complete sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            http://www.sanger.ac.in/KHGP/Chr6
IMPORTANT: This sequence is not the entire insert of clone
RPI1-525021 It may be shorter because we sequence overlapping
sections only once, except for a 100 base overlap.
The true right end of clone RPI1-525021 is at 163960 in this
sequence. The true left end of clone RPI1-232H4 is at 132449 in
this sequence. The true right end of clone RPI3-380BB is at 100 in
this sequence. This sequence was finished as follows unless
otherwise noted: all regions were either double-stranded or
sequenced with an alternate chemistry or covered by high quality
data (i.e., phred quality >= 30); an attempt was made to resolve
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             DD 118258 TCCTTTAAAAGAAACCCTGCGAAATGTCTGGGTACACCTGGATGTCCTGGAGTAACAAG 118317

```
all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one Mi3 subclone; and the assembly was confirmed by restriction digest. RPI1-525021 is from the library RPCI-11.2 constructed by the group of Plater de Jong. For further details see http://www.chori.org/bacpac/home.htm
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            consensus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         4730. .5241
